

4. Write a function that reverses the user defined value.

```
def reverse(value):
    return str(value)[::-1]

def main():
    while True:
        users = input("Enter the number or string which you want to reverse: ").strip()

        if users == "":
            print("✗ Input cannot be empty. Please try again.")
            continue

        reverse_result = reverse(users)
        print("✓ Here the reverse value is:", reverse_result)
        break

if __name__ == "__main__":
    main()
```
